# CREEK CRITTERS

## HOW HEALTHY ARE YOUR STREAMS?

Learn to identify your local creek critters and you can find out. Bugs have varying sensitivities to pollution, so what you can find in your streams can tell us a lot about your stream health!

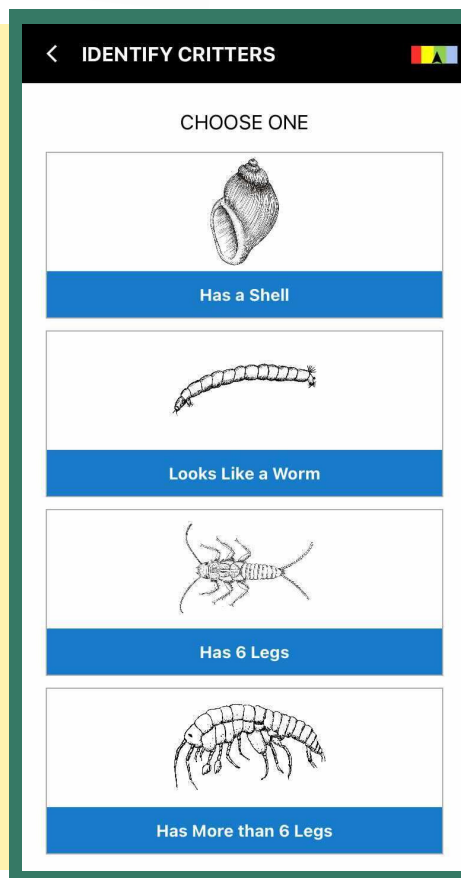

**1** Download the free Creek Critters app to your iOS or Android device.

**2** Gather your water shoes, a small aquarium net, a small pan or bucket, a hand lens, and a partner!

**3** Follow simple step-by-step instructions to collect bugs in your stream.

**4** Identify bugs with the app's interactive ID guide. Explore pictures and videos to figure out who's who!

Your results will be uploaded to the Clean Water Hub, a national water quality monitoring database! Explore the Hub and find out more about water quality in your community at [www.cleanwaterhub.org](http://www.cleanwaterhub.org).
