

SALT WATCH™

IZAAK WALTON LEAGUE OF AMERICA

Do you know how salty your streams are?

Road salt (sodium chloride) keeps us safe on roads and sidewalks in the winter, but too much of it can threaten wildlife and human health. Salt Watch is a national community science program where volunteers can order free kits to track levels of chloride in their local streams throughout the winter. By raising awareness and using real data, we can make smarter and safer salting decisions!

1

Request your
free kits at
SaltWatch.org

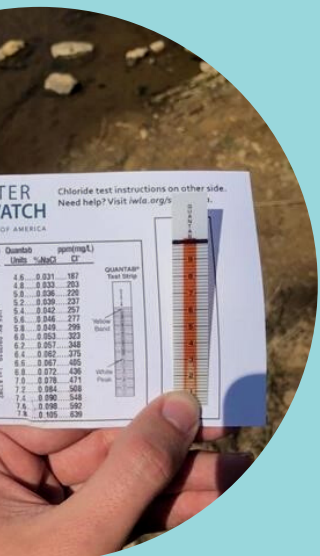

2

Collect 4
chloride
readings at
your stream

3

Upload a photo
of your test
strip to the
database

4

Share your
findings with
the community
